

Abhishek Prashant

Full Stack Software Engineer

abhishekprashant09@gmail.com
+91 9130930318 · Bengaluru, India
github.com/t3hcrazy

Software engineer with nearly seven years building production frontend and full-stack products across web and mobile. Deep experience shipping React and React Native applications at scale, now working across the stack in Go — building and migrating backend REST services, improving observability, and hardening delivery pipelines.

WORK EXPERIENCE

Qlik Jul 2024 – Present
Full Stack Software Engineer Bengaluru

- Built **Minihomes**, a new way to logically organize resources for performing specific tasks, increasing user productivity.
- Built the **Discovery Agent** insight feed that visualizes changes in customer data, helping companies spot trends and act on them efficiently, and shipped an embed feature so users can surface the feed inside their own dashboards.
- Led a major migration of REST services to Qlik's internal best practices, which unblocked deployment of the embed feature.
- Partnered with the PDG team to improve service observability and with QA to ensure timely, high-quality code deployments.
- Handled legacy code upgrades and KMS key migration, and implemented CI pipeline fixes that decreased release time by 30%.

Hwayz Oct 2023 – Jun 2024
Senior Software Developer Bengaluru

- Spearheaded development of multiple consumer-facing apps in React Native and internal dashboards in React, driving revenue growth, consumer retention, and revenue monitoring.
- Developed a restaurant order-taking (KOT) system for rapid, efficient in-store ordering, plus a kitchen display system (KDS) for accurate order-status management.
- Implemented native modules for the customer app including OTP auto-read, and integrated Firebase, Google Maps SDK, and Juspay's Hyper SDK for payments.

Shopse Oct 2020 – Sep 2023
Senior Software Developer Pune / Bengaluru

- Built NTB mobile flows in React Native for banks and NBFCs including IIFL, Kotak, HDFC, ICICI, and DMI, contributing nearly 30% of total revenue within a year.
- Implemented an admin dashboard with SSO that unified authentication across internal sites and enabled user onboarding onto the platform.
- Led a consumer-app design revamp in React Native and a React rework of the checkout flow, driving user growth and higher daily customer volume.
- Automated web and mobile builds via Jenkins, enabling QA to generate builds and run testing efficiently.

PROJECTS

- **Chatbot Flowbuilder** — React web app for designing chatbot interaction flows, with drag-and-drop text widgets and validation for fully connected nodes. github.com/t3hcrazy/chatbot-flowbuilder
- **Typing App** — Cross-platform Expo app measuring words per minute, with Supabase login and authentication. github.com/t3hcrazy/typingapp

SKILLS

Backend & General: Go, REST APIs, CI/CD, Jenkins, GitHub Actions, ArgoCD, MySQL, MongoDB, Git, Bitbucket, Jira

Frontend: TypeScript, JavaScript, React, Micro Frontends, State Management, Redux, Zustand, Webpack, Rspack, Vite, HTML, CSS, Responsive Design, Animations

Mobile: React Native, Native Modules, React Native Reanimated, Animations, Gesture handling

EDUCATION & CERTIFICATIONS

BITS Pilani, K.K. Birla Goa Campus
B.E. Chemical Engineering · 2018

- Full Stack Web Development — IIT Roorkee
- Deep Dive into Modern Web Development — University of Helsinki
- Data Science with Python, Excel & R — XLRI
